

Features and Enhancements

- 1. Sharing Feature** - Previously, a child institution could share up to their parent institution and vice versa, but beyond that the system restricted them. Now that limitation has been removed, and users are able to share several tiers up or down. For example, the district can share all the way up to the state, or the state can share all the way down to the school level. The reporting rules for shared surveys remain the same, and if the owner of a survey chooses to unshare it with another institution, that institution will no longer see the survey in their account and will not be able to pull reports on the survey at that point.

Demo Elementary School- Business Development X

- 2. Reset Password Messaging** - Several messages on the site have been updated to provide more clarity to the user, specifically with regards to resetting their password. In addition, users are now notified that the link they receive in their 'Reset Password' email will expire within 24 hours.
- 3. Alphabetical Sorting** - A-Z or Z-A sorting is now possible on the Manage Users page, enabling administrators to quickly locate their staff and update their permissions. The Reporting Wizard now alphabetizes all institutions in the left-hand bar of the report in order that users can filter easily by institution.
