

Features and Enhancements

1. Open-Ended Responses Report

Users now have the option to select only open-ended response data when pulling CSV raw or CSV Unstacked data reports. After creating a report in your browser, choose either the CSV Raw or CSV Unstacked version, and select the “Include ONLY open-ended items” checkbox. Checking this box generates a report with just open-ended responses, while leaving the box unchecked generates a standard report with all the survey data included.
